should be visible.

I am a Master of Computing student at the National University of Singapore (NUS) with over a decade of experience in building data-driven and AI-powered products in multinationals and promising startups. My background spans Amazon, GE Global Research, TATA R&D, HealthTech, EdTech, FinTech, and InsureTech, where I've led the end-to-end development of scalable, full-stack analytics and software systems in industrial health monitoring, product recommendation, customer service capacity planning, cross-border ecommerce, insurance aggregation, and government engagement. Currently, I am deepening and broadening my knowledge in AI, big data systems, and web3 technologies, with a strong interest in applying AI to real-world business problems. I strive to transform knowledge into impactful and meaningful products that address real-world problems and add lasting value to society.

Outside of my professional pursuits, I stay active and engaged through a diverse set of interests. I enjoy playing Cricket, swimming, and working out at the gym, activities that help me maintain discipline and keep me in shape. I am an avid reader with a strong interest in science fiction, tech, and futuristic concepts drawn to the ideas that explore the future, technology, and ethics. I also have a keen interest in finance and value investing. Additionally, I enjoy traveling and meeting people from different cultures, learning about their cuisines, traditions, and perspectives. These experiences continually broaden my horizons on life. I believe in working, connecting, and learning with curiosity and positivity.

The description seems too verbose.

Idea:
Represent this info like a CV with a easy to read and understand format.

ANTHONY DAVIES

Summary

Senior Web Developer specializing in front end development. Experienced with all stages of the development cycle for dynamic web projects. Well-versed in numerous programming languages including HTML5, PHP OOP, JavaScript, CSS, MySQL. Strong background in project management and customer relations.

Skill Highlights

- Project management
- Strong decision maker
- Complex problem solver Creative design
- Innovative
- Service-focused

Here's a format that can be used to describe yourself and your journey.

Experience

Web Developer - 09/2019 to 05/2022

Luna Web Design, New York

- Cooperate with designers to create clean interfaces and simple, intuitive interactions and experiences.
- Develop project concepts and maintain optimal workflow.
- Work with senior developer to manage large, complex design projects for corporate clients.
- Complete detailed programming and development tasks for front end public and internal websites as well as challenging back-end server code.
- Carry out quality assurance tests to discover errors and optimize usability.

Education

Bachelor of Science: **Computer Information Systems** - 2019
Columbia University, NY

Certifications

Gig Secure

Blockchain and Web3 Technologies

Software Engineering

Operations Research

2026

Developed Gig Secure, a decentralized freelancing platform that implements escrow-based payments, milestone tracking, dispute resolution, and reputation management. Architected the smart contracts as a finite state machine to enforce valid workflow transitions, guaranteeing transactional integrity, automated settlements, and tamper-proof contract execution. The interaction between freelancers and clients was modelled as a strategic game.

Technical Skills: Blockchain, Decentralized Application (dApp), Finite State Machine (FSM), Game Theory, Smart Contracts, Ethereum (ERC-20 Tokens Standard), Cryptographic Verification (AES-256 Encryption), Consensus Mechanism, Metamask Wallet Integration, Role-Based Access Control (RBAC), Universal Upgradeable Proxy Standard (UUPS), React, Solidity, IPFS

Management Competencies: Presentation, Documentation, Project Management, Freelancing Business Case Analysis

Extractive Question Answering

Artificial Intelligence and Machine Learning

Statistics

2025

Fine-tuned BERT and ALBERT with span-labelling heads to build an extractive question answering system that extracts answers as a contiguous span of text from a passage, achieving F1 and Exact Match (EM) performance at par with the benchmark, validating the effectiveness of transformer-based models for extractive question answering. Its application domains include customer service, knowledge management, legal research, and public information systems.

Technical Skills: Span Labelling, T hidden, On demand, On Hover, (ning), Sliding Windows, Joint Probability Inference, Hyperparameter Tuning, Python (Py and rest in an inner page.

Management Competencies: Pre-Defined Competencies for Management

Portfolio's format can be less verbose. Information is hidden, On demand, On Hover, and rest in an inner page.

Refer the next page for reference.

Generative AI Training App to Train Nurses in English

Artificial Intelligence and Machine Learning

Software Engineering

Developed a Generative AI-powered mobile application to train nurses for Occupational English Test (OET) preparation. It consisted of a RAG-based chatbot to help nurses prepare for the test by comparing their responses to questions with AI-based

A CURATED SELECTION

Our case studies highlight the process behind each project — from idea to impact. See how we solve challenges and create design that resonates.

I'm a UX designer and front-end developer based in Austin, Texas. I create user experiences that solve real problems—from healthcare monitoring systems to enterprise software to mobile apps used nationwide.

With backgrounds in both art and computer science, I bring a unique perspective to product design. I don't just design interfaces—I often code them too. This means I understand what's possible, what's practical, and how to build design systems that scale.

I've spent the last decade as the lead (and often solo) designer at companies like Nevro, Qualtrics, and Punchh, where I've launched products that serve thousands of users daily. My approach is simple: understand the problem deeply, design the simplest solution, and build it well.

When I'm not designing, I'm teaching kids to code through Colorful Coders or helping small businesses grow through The Kinnect. I believe good design should be accessible to everyone.

NEVRO
Designing an integrated healthcare ecosystem that empowers physicians to remotely monitor pain management patients, bridging the gap between mobile patient apps and clinical oversight tools.

ARRIVE LOGISTICS
Transforming an Excel-like interface into a modern, scannable load board that helps carriers process shipping information faster during high-pressure customer calls.

QUALTRICS
Transforming complex desktop survey tools into an intuitive mobile experience while redesigning the critical Create UI interface used by thousands of enterprise customers.

PUNCHH
Modernizing a white-label restaurant app framework used by hundreds of brands nationwide, bringing it to competitive parity during the pandemic surge in mobile delivery orders.

VODII (FLUEID)
Leading a complete platform redesign for real estate document management, modernizing outdated infrastructure to support future growth in an evolving digital landscape.

TRIPPING
Leading my first UX role, I redesigned Tripping's entire vacation rental platform from homepage to listings, implementing ML-powered image ranking that improved engagement and conversion rates.

The Challenge & Process

Qualtrics faced a significant challenge: how do you transform complex, enterprise-level survey creation into a mobile experience without sacrificing functionality? Desktop dashboards packed with data and needed to work on small screens. Additionally, post-acquisition security requirements demanded a sophisticated mobile authentication solution.

I joined the team during an exciting growth phase and quickly became involved in multiple product areas. The mobile app became my primary focus, and I was essentially building it from scratch.

The "Magic Link" sign-in process was one of my first major challenges. Security was paramount—this wasn't a consumer app but an enterprise tool handling sensitive survey data. The authentication flow needed to be both secure and user-friendly, a difficult balance that required close collaboration with security teams.

Adapting desktop dashboards for mobile required a different mindset. I couldn't simply shrink desktop layouts—I needed to prioritize information and restructure interactions for touch interfaces and smaller screens. Working closely with engineers in Krakow, Poland, I created wireframes and mockups in Sketch (later transitioning to Figma) that guided development.

The Create UI project was different. I inherited this critical interface—the first thing users encounter when building surveys—and saw an opportunity to modernize it significantly. Whether users started from scratch or used templates, the Create UI shaped their entire experience.

I developed high-fidelity prototypes that simulated real-world survey creation scenarios. User testing became crucial—I needed to understand how people actually created surveys, not just how I thought they should. Post-testing, I meticulously documented feedback, identifying patterns that informed both immediate design iterations and longer-term product roadmap planning.

The Solution & Impact

The mobile app redesign delivered an intuitive experience that brought Qualtrics functionality to users on the go. The Magic Link authentication system balanced security requirements with user convenience—users could securely access their accounts without cumbersome password entry on mobile devices.

For mobile dashboards, I restructured information hierarchy to prioritize what users needed most frequently. Progressive disclosure patterns kept advanced features accessible without cluttering the initial view. Touch interactions felt natural, with appropriately sized tap targets and gestures that matched mobile conventions.

The upcoming "Northstar" designs will expand mobile functionality further, adding ticketing creation and maintenance features. These designs build on the foundation I established, maintaining consistency while adding capabilities users have requested.

The Create UI redesign transformed the survey creation experience. I modernized the aesthetic while improving the functional flow. Template selection became clearer, with better previews helping users choose starting points. The scratch-build process followed a more logical progression, reducing cognitive load during survey design.

The high-fidelity prototypes I created were detailed enough to guide engineering implementation closely. When the Create UI went live, it matched my prototypes remarkably well—a testament to thorough design specification and strong collaboration with the development team.

User feedback validated the redesign approach. The improved Create UI made survey creation more approachable, especially for new users, while maintaining the power features that experienced users relied on.

The impact is ongoing. My mobile designs are now in production, serving Qualtrics customers daily. The Create UI redesign continues to evolve based on the research and design foundation I established. Being part of Qualtrics during its growth phase, contributing to products that thousands of enterprise customers use, was particularly rewarding. The fidelity between my prototypes and the live implementations demonstrated the value of thorough design process and effective collaboration.
